The true focus of Cancer's Best Medicine is that you can nourish the body so that cancer cannot thrive; you can halt the underlying cancer process that gives rise to tumors. Orthodox treatment of tumor symptoms misses the mark by failing to address the cause of cancer at the cellular level. A person must bring about an environment within the body where the process of cancer cannot thrive. The good news is that it is within our capability through diet and lifestyle changes to make our body chemistry acidic and more alkaline, and richer in digestive enzymes and oxygen. The book reminds the reader that we can live our lives in ways that enhance the immune system. By doing these things we enhance our body's own healing power, while preventing cancer from getting a free ride to do its dirty work. Read this book, and when you finish it you will very likely want to share with friends and loved ones the timely and well-researched information that it offers.
